1. Taiwanese Patent Application No. 509205 published August 9, 1989 discloses: A protecting device of hot-laminating apparatus at least includes a housing (1) mounted therein a pair of stands (2a, 2b). There are a pair of feeding rollers (3a, 3b) and a pair of heating-pressing rollers (4a, 4b) pivotally mounted between the pair of stands (2a, 2b). A heating member (41) is disposed in each of the pair of heating-pressing rollers (4a, 4b), and a pair of heat shields (5a, 5b) are mounted surrounding the pair of heating-pressing rollers (4a, 4b). The characteristic is that at least one thermo-sensitive member (6) is set on the pair of heat shields (5a, 5b) to detect the temperature in the hot-laminating apparatus. The circuits are cut off to protect the hot-laminating apparatus when a particular temperature is reached. In addition, an insulation jacket 7 sleeves each end of the heating member (41) to prevent the circuit of the heating member (41) from contacting with the metal frames (8) to cause a short circuit.

Respectfully submitted,
